RiverPark to offer Xite Infotainment System with Large Vehicle Navigation

XiteSolutions North America Inc. brings an industry first, offering RV'ers integrated Large Vehicle Navigation as an OEM solution.

Elkhart, Indiana – March 22, 2012 The XSG2NA Infotainment Center, developed by XiteSolutions North America Inc., is a feature rich 7” touchscreen in-dash system that provides drivers with advanced navigation while simultaneously providing entertainment, information and connectivity.

The launch of the next generation XSG2NA for 2013 RVs offers new navigation solutions that are simple yet intuitive to operate while presented with the best in class enhanced graphics for an improved user experience. The new Xite LV (Large Vehicle) Navigation option allows drivers to select an RV option and set the specific vehicle dimensional parameters. Once set, the powerful Xite software provides efficient routing and general guidance while taking into account road restrictions and hazards contained within map data and the requirements of driving a large vehicle. “We’ve taken data normally reserved for the commercial truck industry and tailored it to meet the needs of today’s RV’er” states Craig Smith, President of XiteSolutions North America Inc. “The launch of the Xite LV Navigation package is in line with our focus on delivering programs to our OEMs that meet the specific needs of their products.”

The XSG2NA has been designed to ensure that all features an RV user would need are at their fingertips. With its advanced feature set presented with simplified operation and improved user experience, getting to a destination has never been easier or more enjoyable. “The XSG2NA fills a market void at the OEM level.” states Steve Bollero, VP of Operations of RiverPark Inc. “Where after-market systems don’t address the specific needs of the RV’er, XiteSolutions North America Inc. continues to deliver successful OEM based product programs. We are pleased to once again offer an industry first to our valued OEMs and their customers.”

The addition of the Xite LV Navigation package to the XSG2NA program for model year 2013 compliments the Infotainment Center’s already industry benchmark feature set.
